Since there is a ratio between the third and fourth terms, it follows that they must be of the same denominate valuer Hence, of the three terms given, we may always take for the third term of our proportion the one which is of the same kind as the answer required; then, if the answer sought is to be greater than this third term, the second term must exceed the first; but if the answer sought is to be less than this third term, then the second term must be less than the first. 99. From #hat has been said and done, we deduce this first form for the RULE OF THREE. Form a proportion by placing for the third term that which is of the same kind as the answer sought; the two...
