

## Owyhee Canyonlands Wilderness environmental impact statement

Filesize: 2.33 MB

### ***Reviews***

*A whole new eBook with a brand new point of view. It is definitely simplistic but shocks in the 50 percent of the publication. I am just pleased to explain how this is the greatest ebook i have read during my very own daily life and could be he best ebook for possibly.*

## OWYHEE CANYONLANDS WILDERNESS ENVIRONMENTAL IMPACT STATEMENT

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 34 pages. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1984 Excerpt: . . . (ID-16-48B) and ID-16-49A. 2. 560 acres state; 240 acres private between WSAs OR-3-195 (ID-16-48B), ID-16-48C and ID-16-53(NV-010-103A). 3. 360 acres private between ID-16-49A, 16-49D and 111(16)-49E. GEOLOGY; MINERALS AND ENERGY 1. Geology The WSAs lie within a geological region known as the Owyhee Uplands which encompass southeast Oregon, southwest Idaho and northernmost Nevada. These uplands originated from basalt rhyolite volcanism during the Miocene Epoch (Tertiary Period) between six and twenty-two million years ago. The southern portion of the Owyhee Uplands through which the Owyhee River has carved its canyons is characterized by an extensive flat lying basalt plain stretching from the Bull Run Mountains of Nevada to the Santa Rosa Mountains of Oregon. The plain contains numerous basalt capped mesas, tables, buttes, canyon rims, and valleys. This basalt cap consists of many thin flows of fine-grained, vesicular alkaline-olivine basalt and interbedded sedimentary units. The sedimentary units contain basalt clasts, tuffaceous sands and gravels, ash beds, local diatomite, and alluvial and fanglomeratic sediments. Beneath the basaltic cap, the Owyhee River and its tributary streams have exposed up to 1, 000 feet of rhyolite and densely welded tuffs. Lying below the rhyolite are several thousand feet of latite and basalt flows. The Pre-Tertiary (Paleozoic) rocks which lie under the volcanics are unknown. Evidence suggests that the Owyhee Upland area was part of a Late Paleozoic deposition basin indicating the potential for metasedimentary and metamorphic rocks lying a depth beneath the WSAs. 2. Mineral and Energy Potential Energy and mineral resources throughout the WSAs were...
